NOW BUILDING

Proposa

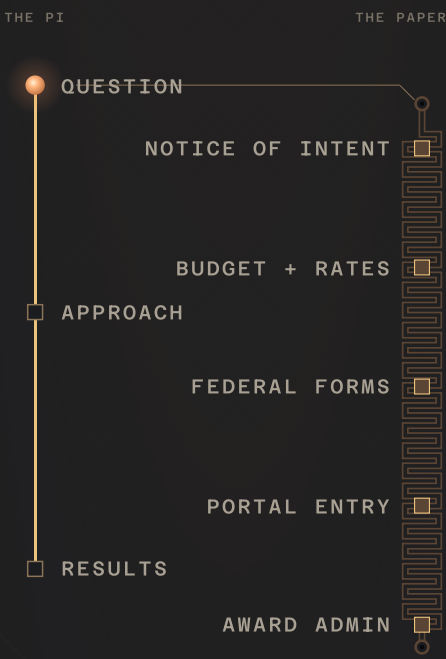

The finance side of federal research proposals, handled.

SWIPE TO SEE IT →

THE PROBLEM

Every grant begins with a question.

Then the paperwork starts: a notice of intent, then a proposal with budgets, rates, federal forms and portal submissions, then an award to administer. Proposa exists to unshackle the PI from all of it.

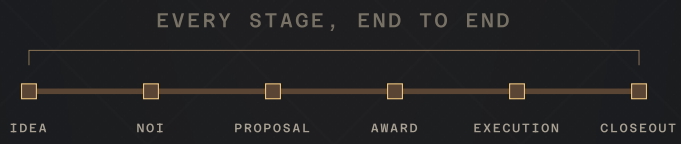

The PI keeps the question. Proposa carries the rest.

WHY I'M BUILDING THIS

I know this process from womb to tomb.

From 2022 to 2026 I was a Space Sector Financial Manager at the Johns Hopkins Applied Physics Laboratory.

Hundreds
of proposals submitted

100+
active grant and contract awards managed at once

I proposed and managed a NIAC Phase III firm-fixed-price program, managed the TIMED spacecraft mission, and led budget formulation for APL's Space Formulation mission area as the sector's expert on new business investments.

Now I build the AI and systems to do that work for every PI.

THE PRODUCT

Proposa handles the finance side of a proposal.

Built for sponsored-programs offices and the researchers they support.

FIND Open federal funding that fits a researcher, with comparable past awards. BUILDING NOW	**BUDGET** Compliant budgets with your institution's rates, ready for the SF-424 R&R. BUILT
CHECK Catches identity leaks in files before a dual-anonymous review. BUILDING NOW	**FILL** Enters the finished budget into the agency portal for you. IN DEVELOPMENT

"Built" means working code with tests as of 2026-10-24.

WHAT IT SAVES

Give your finance team its time back.

PROPOSALS YOUR OFFICE SUPPORTS PER YEAR

50 PROPOSALS A YEAR

≥ 100 hours

of financial-manager time on proposal budgets alone, at a floor of two hours per proposal.

AFTER THE AWARD

At a lab managing about 250 active awards, keeping the books can take one to two people full time. That is the work Proposa is designed to take on.

Estimates from the founder's experience, not measured customer results.

THE ENGINE

ARCH-IE: your organization's private AI.

ARCH-IE is the AI operating system behind everything Bryant Systems builds. Inside Proposa it becomes your organization's own AI: it learns your rates, templates and past proposals, and it runs on hardware you control.

Proposa integration in development. ARCH-IE runs today on an NVIDIA DGX Spark in the Bryant Systems lab.

ALSO FROM BRYANT SYSTEMS

One engine, several products.

Each one runs on ARCH-IE.

BRYANTFORGE

Turn an idea into a working design suite and automated workflows for small businesses.

GNOMIE

Home projects and task management, indoors and out.

WESTMINSTER SENTINEL

Local civic intelligence.

LET'S TALK

Let's talk about Proposa.
