NOW BUILDING

Proposa

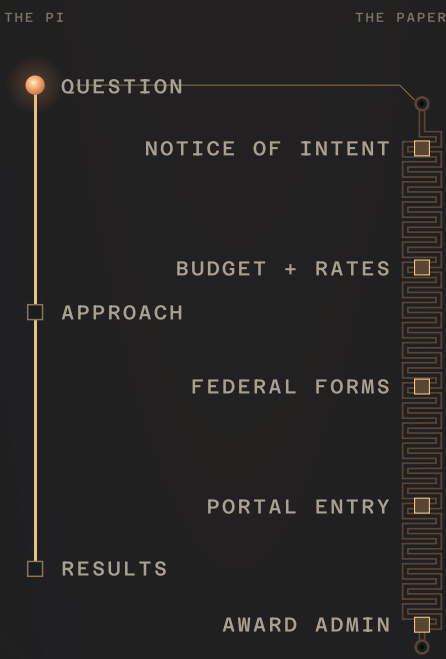

Takes the grant paperwork off researchers' desks.

SWIPE TO SEE HOW →

THE PROBLEM

Every grant begins with a question.

What follows is paperwork: a notice of intent, budgets and rates, federal forms, portal submissions, then years of award administration. Proposa lifts all of it off the PI.

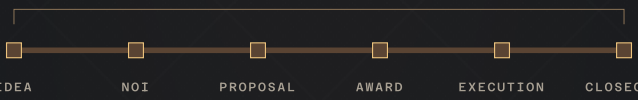

The PI keeps the question. Proposa carries the rest.

WHY I'M BUILDING THIS

I've run every stage, from idea to closeout.

Space Sector Financial Manager at the Johns Hopkins Applied Physics Laboratory, 2022 to 2026.

Hundreds
of proposals submitted

100+
grant and contract awards managed at once

- Proposed and managed a NIAC Phase III firm-fixed-price program
- Managed the TIMED spacecraft mission
- Led budget formulation for APL's Space Formulation mission area, and served as the sector's expert on new-business investments

Now I engineer the AI and systems that do this work for every PI.

THE PRODUCT

Proposa does the work between idea and award.

Built for sponsored-programs offices and the researchers they support.

FIND Open federal funding matched to a researcher, with comparable past awards. **BUILDING NOW**	**BUDGET** Compliant budgets at your institution's rates, ready for the SF-424 R&R. **BUILT**
CHECK Flags identity leaks before a dual-anonymous review. **BUILDING NOW**	**FILL** Enters the finished budget into agency portals. **IN DEVELOPMENT**

Built: working code with passing tests, as of 2026-10-24.

WHAT IT SAVES

Give your finance team its time back.

PROPOSALS PER YEAR

50 PROPOSALS A YEAR

≥ 100 hours

of finance time back on budgets alone, counting just two hours per proposal.

AFTER THE AWARD

A lab with about 250 active awards can need one to two people full time just to keep the books. Proposa is built to take that on.

Founder's estimates from experience, not measured customer results.

THE ENGINE

ARCH-IE: your organization's private AI.

The AI operating system behind every Bryant Systems product. Inside Proposa it learns your rates, templates and past proposals, and it runs on hardware you control.

Proposa integration in development. ARCH-IE runs today on an NVIDIA DGX Spark in the Bryant Systems lab.

ALSO FROM BRYANT SYSTEMS

One engine, several products.

All built on ARCH-IE.

BRYANTFORGE

From idea to working design suite and automated workflows, for small businesses.

GNOMIE

Home projects and tasks, indoors and out.

WESTMINSTER SENTINEL

Local civic intelligence.

LET'S TALK

Let's talk about Proposa.
