NOW BUILDING

Proposa

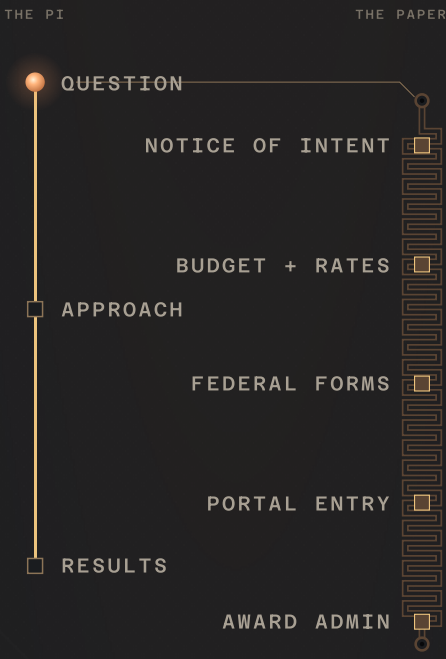

Takes the grant paperwork off researchers' desks.

SWIPE TO SEE HOW →

THE PROBLEM

Every grant begins with a question.

Then come the notice of intent, budgets, federal forms, portal submissions and years of award administration. The real delay is the back-and-forth between finance and the PI over travel, materials, conferences and labor. Proposa closes that loop.

The PI keeps the question. Proposa carries the rest.

WHY ME

I've run the grant business. Now I build its systems.

SPACE SECTOR FINANCIAL MANAGER · JOHNS HOPKINS APL · 2022–2026

300+ grant and cooperative-agreement proposals	**1 in 3** proposals won
9 figures total award value across the portfolio	**100+** awards managed at once, eight figures on hand

THE BUSINESS

- Financial manager for NASA's **TIMED** mission; proposed and managed **NIAC Phase III** Diffractive Solar Sailing
- Led **Space Formulation** mission-area budget formulation; the sector's new-business investment expert
- About **four hours** per proposal budget, faster than most, as NASA and NSF requirements kept growing

THE SYSTEMS

- Built Proposa's budget engine: **2 CFR 200** MTDC, F&A, escalation and cost share in exact decimal math, reconciled to the **SF-424 R&R**
- Every line held to a **100%** branch-coverage test gate
- Runs **ARCH-IE**, a private AI operating system, on my own NVIDIA DGX Spark
- Directs a team of **Claude, Codex and Grok** agents building Proposa

THE PRODUCT

Proposa does the work between idea and award.

Built for sponsored-programs offices and the researchers they support.

FIND Open federal funding matched to a researcher, with comparable past awards. **BUILDING NOW**	**BUDGET** Compliant budgets at your rates, ready for the SF-424 R&R. Re-escalates when a start date slips. **BUILT**
CHECK Flags identity leaks before a dual-anonymous review. **BUILDING NOW**	**FILL** Enters the finished budget into agency portals. **IN DEVELOPMENT**

Built: working code with passing tests, as of 2026-10-24.

WHAT IT SAVES

Give your finance team its time back.

PROPOSALS PER YEAR

50 PROPOSALS A YEAR

~200 hours

of finance time on proposal budgets alone, at the founder's own four-hour average. Most take longer.

AFTER THE AWARD

NASA routinely asks for budget revisions or resubmissions when start dates slip or a PI changes institutions: hours of repeat work with zero technical input. At a lab with about 250 active awards, that upkeep can take one to two people full time. Proposa is built to take it on.

Founder's estimates from experience, not measured customer results.

THE ENGINE

ARCH-IE: your organization's private AI.

The AI operating system behind every Bryant Systems product. Inside Proposa it learns your rates, templates and past proposals, and it runs on hardware you control.

Proposa integration in development. ARCH-IE runs today on an NVIDIA DGX Spark in the Bryant Systems lab.

ALSO FROM BRYANT SYSTEMS

One engine, several products.

All built on ARCH-IE.

BRYANTFORGE

From idea to working design suite and automated workflows, for small businesses.

GNOMIE

Home projects and tasks, indoors and out.

WESTMINSTER SENTINEL

Local civic intelligence.

LET'S TALK

Let's talk about Proposa.

Kyle Bryant, Founder / Developer,
Bryant Systems.
